                                      /note="Organ: Eye; vector: pcMvSpORT6; Post-mortem iris
tissue was pooled from 10 individuals ranging in age from
4-80 years and RNA was extracted. From this pooled sample
an aliquot of 60ug of total RNA yielded 2.17ug of mRNA. A
directionally cloned cDNA library in the pcMvSpORT6 vector
was constructed at Life Technologies, essentially
following the protocols of the SuperScript Plasmid System
full details of which are contained in the manufacturer's
Instruction manual (http://www.lifetech.com/). First
strand synthesis was carried out using a Not I
primer-adapter [5'-pGACTAGTTCTAGATCGCGAGCGCCCC(T)15-3'
]. Not I/Dlunt end inserts were cloned into the Not I/EcoR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="Vector: pBluescript sk(-); Site_1: EcoRI; Site_2:

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton

                                                                                                                                                                                                            152
                                                                                 Conservative
                                                                                                                                                                                            Site_2: ECORI; 65,000 proliferating erythroid cells from
the buffy coat of a blood donation were obtained by flow
cytometric separation after a 5-day culture period in the
presence of erythropoietin. Total RNA was purified from
the sorted cell population using TRTzol reagent. RNA (0.3
ug) was converted into double stranded cDNA using
Clontech's Capfinder CDNA Library Construction Kit
(Clontech) according to the manufacturer's protocol and
cloned into EcorI digested Lambda Zap II vector
(Stratagene). The phage library was amplified once prior
to in vivo excision in SOLR cells. Individual colonies
were grown, and the cDNA inserts were sequenced in high

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                   (OCIF) binding molecule (OBM). The protein promotes and supports the separation and maturation of Osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PFH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein for investigative and disposetic substances.

The present sequence encodes an osteoclastogenesis inhibitory factor (OCIF) binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane protein then affinity chromatography using OCIF. It exists in a full-sequence

OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This cDNA encodes a human RANKL, a ligand for the RANK (receptor CC activator of necrosis factor-kappab (NF-kB)) polypeptide. RANK is a activator of necrosis factor (TNF) amply amply a soluble RANK (CC may be used for inhibiting activation of NF-kB, by contacting a cell CC expressing membrane-associated RANK with a soluble RANK which binds to CRANK ligand (RANKL). RANKL polypeptides can activate RANK and can be CC used to induce maturation of dendritic cells and enhance their CC soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists CC may be useful in ameliorating negative effects of an inflammatory capacity. The composition may also be used for regulating an immune or inflammatory response. Inhibition, or acute inflammatory capacity response that result from triggering of RANK, e.g. in treating toxic response that result from triggering of RANK, e.g. in treating toxic reactions. They can also be used in adjunct therapy for disease contacterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK-expressing cells from the negative effects of chemotherapy or the presence of high levels of from the negative effects of chemotherapy or the presence of high levels contacts.

RANK is a member of the tumour necrosis factor (TNF) family. Host cells transformed or transfected with an expression vector comprising the RANK encoding nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to RANK ligand (RANKL). The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in inflammatory reactions. They can also be used in adjunct therapy for classes characterised by neoplastic cells that express RANK. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-OCT-1997;

CC kappaB (RANK) proteins and their corresponding DNAs. RANK is a member CC of the tumour necrosis factor (TNF) receptor superfamily and associates CC with TNF receptor associated factor (TRAF) 2 and 3 which are important CC in the regulation of immune and inflammatory response. The receptors of immune and inflammatory response. The receptors CC are useful for regulating immune response and in screening for inhibitors CC of these receptors. The cytoplasmic domain of RANK is used in developing CC assays for inhibitors of signal transduction, e.g. for screening the molecules that inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, CC TRAF5 and particularly TRAF6. NF kappaB inhibition by RANK antagonists CC are useful in ameliorating the negative effects of an inflammatory CC response that result from triggering of RANK, e.g. in treating toxic consolved the effects of bone rescription. RANK acts as an anti-cc apoptotic signal and rescue the cells that express RANK from apoptosis. CC soluble forms of the receptor are used in vivo or in vitro based CC screening tests for agonists or antagonists of RANK mediated NF kappa B activation, or to inhibit transduction of a signal via RANK. RANK compositions are used in the CC development of both agonistic and antagonistic antibodies, or as an acc adjunct therapy for disease characterised by neoplastic cells that cc are useful for modulating the formation of osteoclasts from osteoclast form osteoclast find screening the inhibitors of diseases associated with RANK/TRAF6 interactions and inhibitors of diseases associated with RANK compositions. They care used in which it is a member of the receptor as associated with RANK compositions. They care used in highlitors of diseases associated with RANK compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; receptor activator of nuclear factor kappaB ligand; RANKL; NF; tumour necrosis factor; TNF; TNF receptor associated factor; TRAF; immune response; inflammatory response graft-versus-host reaction; toxic shock; sepsis; acute inflammatory reaction; bone resorption;

RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to chromosome 13q14. RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 954 BP; 255 A; 239 C; 227 G; 233 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and

           Human; tumour necrosis factor-related activation induced cytokine;
                                                    cDNA encoding human TRANCE protein splice variant 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention also encompasses gene therapy methods to correct gene-activating mutations, associated with e.g. familial expansile osteolysis (FEO) and early onset Paget's disease of bone (EP). The present sequence is a cDNA encoding full-length human RANKL (huRANKL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              factors (TRAFs). Triggering of RANK by overexpression or co-expression of RANK and membrane bound RANK ligand (RANK) results in upregulation of the transcription factor NF-KappaB, a ubiquitous transcription factor that is most extensively utilised in cells of the immune system. Inhibition of NF-KappaB by RANK antagonists is useful in ameliorating negative effects of inflammatory reactions, and the effects of excess bone resorption. The RANK DNAs, proteins and their analogues are useful for the preparation of pharmaceutical compositions, for infecting target cells for use in Gene +hereny analogues in infecting target
                                                                                                   18-JUN-2002 (first entry)
                                                                                                                                                                                       ABK12877 standard; cDNA; 1945 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cells for use in gene therapy applications in diagnosing diseases associated with RANK, and as targets for use in screening assays. They may be used in the treatment or diagnosis of immune system dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 954 BP; 255 A; 239 C; 227 G; 233 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a novel receptor, referred to as (receptor activator of NF (nuclear factor) *RappaB), a member of TN (tumour necrosis factor) receptor superfamily. RANK is a Type I transmembrane protein that interacts with TNF receptor associated
                                                                                                                                                                                                                                                                                                        689
                                                                                                                                                                                                                                                                                                                                                                                         629
                                                                                                                                                                                                                                                                                                                                                                                                                                  640

                                                                     ş
                                                                                                                                                                                                              cc having a disorder comprising insufficient or excessive cartilage or comprising insufficient or excessive cartilage or cc skeletal growth. The method of the invention involves administering to cc the mammal a tumour necrosis factor-related activation induced cytokine (TRANCE ) modulating agent. The method is useful for treating a mammal cc having a disorder comprising insufficient or excessive cartilage or complete the disorder comprising insufficient cartilage or cskeletal growth where the disorder comprising insufficient cartilage or cc resulting from traumatic injury, surgery, osteopetrosis, cranitofacial-skeletal discrepancies and bone or cartilage damage cc resulting from traumatic injury, surgery, osteopetrosis, or heumatic crawthitis, and disorders comprising excessive cartilage or skeletal cc growth are selected from acromegaly, gigantism, exostosis, carilaginea, cc exostosis bursata and multiple osteocartilaginous exostoses. The method concluded acid sequence encodes the human TRANCE protein, splice variant cc family and acts directly on cartilage-producing cells (chondrocytes).

```

The present invention relates to a new method of treating a mammal having a disorder comprising insufficient or excessive cartilage or skeletal growth. The method of the invention involves administering

a tumour necrosis factor-related activation induced

cytokine

ő

mammal

OPGL is also an activator of mature osteoclasts. The specification describes a method for the in vivo down-regulation of OPGL activity in an animal. The method comprises using at least one OPGL polypeptide or subsequence, and/or at least one OPGL analogue to induce an immune response in the animal. The method and OPGL polypeptide are useful for treating, preventing and ameliorating osteoporosis or other diseases or conditions characterised by excessive bone resorption.

Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastogenesis in a dose dependent manner. The OPGL protein is synthesised as a type II transmembrane protein. The murine and human OPGL polypeptides are 87% homologous. OPGL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein. The murine and human OPGL polypeptides are 87% homologous a potent osteoclast differentiation factor when combined with

                                                                                                                                                                                                                                                                                                                                                                                                encoding OPG binding protein are used to produce recombinant OPG binding protein. OPG binding protein is used in binding assays to determine osteoprotein. OPG binding protein is used in binding assays to determine osteoproteins: (OC) in biological samples; to screen for specific binding agents (particularly agonists and antagonists, including intracellular proteins); to raise Ab (useful in immunoassays for detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation and activation receptor (ODAR). The nucleic acid molecule encoding OPG binding protein can be used to detect OPG binding protein-encoding sequences, e.g. screening for related sequences, also to produce transgenic animal models, while complementary sequences are used for antisense regulation of OPG binding protein expression. Modulators of OPG binding protein, particularly soluble forms of OPG binding protein or Ab, are used to treat or prevent bone diseases, e.g. osteoporosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-MAR-1998;

                                                                                                                                             polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc.) leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human PRO
